

## Bar Scientifica

### The impact of music therapy on health outcomes

‘Music Therapy ... an established psychological clinical intervention, delivered by HCPC registered music therapists to help people whose lives have been affected by injury, illness or disability through supporting their psychological, emotional, cognitive, physical, communicative and social needs.’

‘Music Therapists draw upon the innate qualities of music to support people of all ages and abilities and at all stages of life, from helping newborn babies develop healthy bonds with their parents, to offering vital, sensitive and compassionate palliative care at the end of life.’
